Abstract of **EP0155068**

The present invention relates to a device 10 for the measurement of a chemical or ionic species comprising a chemically sensitive layer 57, 59 that develops an electrical potential representative of the concentration of said species, and one or more layers 53, 55 overlaying said sensitive layer 57, 59 and permeable to the chemical or ionic species to be measured, wherein the outermost layer 55 contains polyimide. The device of the present invention has improved resistance to high test sample temperatures. Also provided is a method of measuring such species.
